

Forming Information into Documents
Since 1999

FOR IMMEDIATE RELEASE

XMLComposer 3D Released

Delta, BC - 12-Dec-2009

Metaformix Information Systems has released its newest version of XMLComposer, XMLComposer 3D. XMLComposer 3D extends the capabilities of XMLComposer, providing Dynamic Document Delivery.

XMLComposer 3D is the first phase of XMLComposer enhancements intended to drive XMLComposer as a significant component in any ADF application. Capable of pulling data from multiple sources, including FTP sites, and pushing output to destinations through email and FTP connectors, XMLComposer allows organizations to automate document composition, assembly and delivery simply, and easily.

Metaformix president, John Barker, states: "We intend to continuously evolve XMLComposer into a significant information workflow engine. Dynamic Document Delivery is the first step toward that vision."

XMLComposer is a simple-to-use hub that connects any content manager to TopLeaf XML Composition Software.
